

**BIO4  
PRODUCTS**  
Creating sustainable resources  
for process industry

**BTG Biomass Technology Group** from the Netherlands is an independent SME active in consultancy & project development, and research & technology development. The further improvement of the fast pyrolysis process and development of various FPBO applications are the core activities of the RTD department, while BTG Consultancy provides advisory services focusing on socio-economic impacts and LCA of bio-energy systems. <http://www.btgworld.com/en>

**Derbigum** is a Belgian company specialising in energy-saving and sustainable roof covering materials. Thanks to a continuous investment in research and development, Derbigum has evolved from a traditional waterproofing producer into an international player in ecological, sustainable and energy saving products and services. <https://www.derbigum.com/>

**Hexion** is the global leader in thermoset resins. Through a broad range of thermoset technologies and specialty products, Hexion serves and supports customers in a diverse range of applications and industries. As a global manufacturer operating approximately 60 industrial facilities around the world, Hexion supplies customers through its Epoxy, Phenolic and Coating Resins Division, and its Forest Products Division. <http://www.hexion.com/>

**TransFurans Chemicals (TFC)** is a pioneer in furan chemicals and the world leading producer of furfuryl alcohol, a biomass based chemical. Their main markets are the foundry and refractory industry where furan chemicals are the base material for thermoset resins in demanding high temperature applications. TransFurans Chemicals is a keen investor in innovation and actively expands the application platform of its products. <http://www.transfurans.be/>

**E4tech** is a UK based international strategic consultancy that works with companies, governments, and investors to help them understand the global opportunities and challenges of clean energy and sustainable development. E4tech supports their clients through strategy development and business planning, market and competitor analysis, due diligence support, and policy analysis and development. <http://www.e4tech.com/>

**CAPAX Environmental Services** specialise in high value residual tree based applications and products. This ranges from biofuels such as biocoal, pyrolysis oil to high range tree extracts and green chemistry applications. Vertically integrated strategy implemented by the whole chain activities such as sourcing, growing, harvesting, upgrading and valorisation of lignocellulosic feedstocks including their by-products is their key expertise. <http://www.capax.be/>

**Greenovate! Europe** is an independent expert group dedicated to the development of sustainable business. They cover all parts of the innovation value chain, bringing together the expertise required for technology and service developers to successfully transfer research to market. They bring together over 500 experienced innovation advisers and 2,000 technical experts from 14 countries, providing all of the expertise needed to support the innovation process. <https://www.greenovate-europe.eu/>
